NETWORK UPGRADE
BUSINESS GUIDE
bitcoincash.org/upgrade

WHAT'S HAPPENING?

On November 15, 2020, a new funding feature (the underlined coinbase rule) is coming to Bitcoin Cash.

It empowers the network to fund its own development, profiting businesses in the process.

BETTER FEATURES. FEWER DELAYS.

Instead of donations, 8% of the BCH mining reward will fund network development. Predictable funding means tech talent can be hired at scale to develop the network.

MORE USERS. MORE PROFIT.

The money raised will also fuel broader network development. New apps and other products will attract new users, increasing the demand for exchanges and other businesses over time.

WHICH SOFTWARE TO RUN?

The new funding feature is exclusive to Bitcoin ABC software. To get prepared for the network upgrade, your business simply needs to run Bitcoin ABC 0.22.0 or any later version of the software.

ABOUT BITCOIN ABC

Bitcoin ABC has led the development of Bitcoin Cash since the beginning. Today, they're a team of 10 people.

65 versions of Bitcoin ABC software have been released so far, with new software now being released every two weeks.

For every change made, the team runs ~10,200 tests to maintain reliable software. That's over 25 million tests in 2020 so far.

USEFUL LINKS

Alternative node software will be incompatible with BCH after the network upgrade.
